Microsoft SharePoint

Empower teamwork with an intelligent intranet and content management system that is used for internal purposes to assist with bringing an organization together.

Why Microsoft SharePoint?

- SharePoint **store documents** in a more effective format than a regular folder system
- **Integrations with Office 365, Azure and Dynamics 365** provide more customization options than any other vendor in the market
- A **single platform** that combines everything a business user needs from mobile applications, workflow and business intelligence
- A **common data model** to provide a consistent schema for business data

Solution capabilities

- Bring an organization together so that everyone receives critical information that's relevant to them.
- **Connect to 220+ data sources and services (including on-premises data)** External sharing of files and content with people both inside and outside your organization
- **Customize and extend** with deep integrations across Office 365, Azure and Dynamics 365
- Provide administrative controls with **enterprise-grade** security and governance to protect your apps and data

SharePoint offers

- Digital transformation is changing the landscape of business
- Mobile apps to allow users to access intranets, team sites and content on Android, iOS, and Windows devices
- Communication sites to share and communicate messaging across organizations with customizable, dynamic sub-sites
- Automate business processes by creating alerts and workflows
- Search functions that help surface relevant people and important content
- SharePoint list usage doubles with PowerApps
- Team sites that provide a place for predetermined groups of users to view and collaborate on content, data, and news
